

Electric Motor Temperature Prediction using Machine Learning

Student Name: P V V SATYANARAYANA

Roll No: 23P35A0323

College: ADITYA COLLEGE OF ENGINEERING AND TECHNOLOGY

Electric motors are widely used in industries and household applications. One of the major problems in electric motors is overheating, which can reduce motor life and cause unexpected failures.

The main idea of this project is to predict the temperature of an electric motor using Machine Learning techniques. By using sensor data such as current, voltage, speed and ambient temperature, a machine learning model can learn the patterns and predict motor temperature in advance.

This helps in preventing damage, improving safety and reducing maintenance cost. The proposed system aims to provide an intelligent and data-driven solution for motor temperature monitoring.
