

Electric Motor Temperature Prediction using Machine Learning

Student Name: P V V SATYANARAYANA

Roll No: 23P35A0323

College: ADITYA COLLEGE OF ENGINEERING AND TECHNOLOGY

The system follows a machine learning based design.

Design Flow:

1. Data collection
2. Data preprocessing
3. Feature selection
4. Model training
5. Model testing
6. Temperature prediction

The dataset is cleaned and processed before training. The trained model predicts motor temperature for new inputs.
